

Aside - Pendo Implementation Fixes Required

Date: October 23, 2025

Tester: Meredith

Application: textaside.app + textaside.com

TESTING STATUS

Items Tested: 9/9

Items Passing: 1 (Backend Routes - partial)

Items Failing: 8

Items Partial: 1 (Backend Routes)

1. SIGN-UP PAGE BUTTONS (textaside.com)

Status: ✗ FAIL

What Should Be There:

- "Send a text to get started" button → `data-pendo="button-send-text-signup"`
- "Download the number to your iPhone" button → `data-pendo="button-download-vcf-iphone"`
- Console logs confirming script execution

Test Results:

FAILED - Neither button has data-pendo attribute

Console output:

- Send text button: null
- Download button: null

HTML inspection confirmed:

- `<a href="sms:+14582188508">` - NO data-pendo attribute
- `<a href="/s/CONTEXT.vcf">` - NO data-pendo attribute

Issue: Squarespace code injection script not added or not executing

2. SMS CONTENT TRACKING (Backend Event)

Status:  FAIL - Event NOT Firing

What Should Be There:

- Backend fires `pendo.track('Content Added via SMS', { ... })` when SMS creates content
- Event appears in Pendo visitor timeline with metadata

Test Results:

FAILED - "Content Added via SMS" event NOT firing

Test SMS sent: 9:15 AM CST (Oct 23)

- Content: <https://www.pumphouse-creamery.com/>

- Board: Minneapolis (private)

- SMS delivery:  CONFIRMED - Content appeared in app on Minneapolis board

Pendo Timeline Check (Oct 24, 8:55 AM - next day):

- Found: "SMS Message Received" events  (existing tracking)

- NOT Found: "Content Added via SMS" event  (new event that should fire)

Conclusion:

- SMS reception is being tracked (already existed)

- Content creation via SMS is NOT being tracked (new event not implemented)

- Backend event code was not added or not deployed

Impact: Cannot track when users successfully save content via SMS

ADDITIONAL FINDING - Duplicate "SMS Message Received" Events:

Two "SMS Message Received" events fired for the single SMS sent:

- Event 1: 10:15:03 AM - messageLength: 12 chars

- Event 2: 10:15:13 AM - messageLength: 35 chars (10 seconds later)

Only ONE SMS was sent. Possible causes:

1. Multiple webhook handlers triggering events
2. Different processing steps being tracked separately (hashtag parsing, URL extraction)
3. Unintentional duplication in event tracking code

Investigation needed: Check Twilio webhook handlers for duplicate event firing

3. MODAL BACKDROP FIX (CRITICAL)

Status: ✗ FAIL - NOT IMPLEMENTED

What Should Be There:

- `.modal-backdrop` has `pointer-events: none` OR
- Click handler only triggers on backdrop itself, not children
- Pendo Visual Design Studio can tag buttons inside modals

Test Results:

FAILED - Modal backdrop still blocking Pendo interaction

Modal Tested: "Add to Aside" modal

Pendo Visual Design Studio Test:

- ✗ CANNOT select buttons inside modal
- Backdrop is still blocking click events

Console Investigation:

- `.modal-backdrop`: null (doesn't exist)
- `.modal-content`: null (doesn't exist)
- Found: `<div role="dialog">` with `data-pendo="modal-add-message"`
- Modal has `pointer-events: auto` ✓ (correct)
- Found 0 elements with "modal" in class name

Technical Finding:

- App uses Radix UI modal framework (not standard modal structure)
- Dev team likely applied fix to wrong elements (`.modal-backdrop/.modal-content`)
- Need to find and fix Radix UI overlay/backdrop element instead

This is a CRITICAL BLOCKER - prevents all modal-based feature tracking in Pendo

4. BOARD CARD QUICK ACTIONS

Status: ❌ FAIL - NOT IMPLEMENTED

What Should Be There:

All 4 buttons on each board card need:

- Add: `data-pendo="board-card-add-btn"`
- Rename: `data-pendo="board-card-rename-btn"`
- Invite: `data-pendo="board-card-invite-btn"`
- Delete: `data-pendo="board-card-delete-btn"`

PLUS metadata:

- `data-board-name="[board name]"`
- `data-board-type="private" or "shared"`

Test Results:

FAILED - No Pendo attributes on board card buttons

Tested: Add button on "drip" board (All Boards page)

Found:

- `data-testid="button-add-card-drip"` ✓ (testing attribute exists)
- `data-pendo`: MISSING ❌
- `data-board-name`: MISSING ❌
- `data-board-type`: MISSING ❌

Console command to find all board card buttons:

- Searched for: `button[class*="board-card"], button[data-pendo^="board-card"]`
- Result: Found 0 board card buttons
- Confirms: NO buttons have data-pendo attributes starting with "board-card"

Impact: Cannot track any board card quick action interactions (Add, Rename, Invite, Delete)

Note: Board name "drip" is only in `testid`, not in separate `board-name` attribute

5. SEARCH INPUT FIELD

Status: ❌ FAIL - NOT IMPLEMENTED

What Should Be There:

- Search input has `data-pendo="search-input"`

Test Results:

FAILED - Search input missing data-pendo attribute

Location: /search page

Console output:

- Search input data-pendo: null

Impact: Cannot track search usage or search interactions

6. SORT DROPDOWN OPTIONS

Status: ✗ FAIL - NOT IMPLEMENTED

6A. All Boards Page Sort Options

What Should Be There:

- "Alphabetical (A-Z)" → `data-pendo="all-boards-sort-option" + data-sort-type="alphabetical"`
- "Date Created (Newest First)" → `data-pendo="all-boards-sort-option" + data-sort-type="date-newest"`
- "Date Created (Oldest First)" → `data-pendo="all-boards-sort-option" + data-sort-type="date-oldest"`

Test Results:

FAILED - All Boards sort options missing data-pendo attributes

Location: <https://textaside.app/> (All Boards page)

Console output:

- Found 0 All Boards sort options with data-pendo="all-boards-sort-option"

Impact: Cannot track how users sort their boards

6B. Board Page Sort Options

What Should Be There:

- "Newest First" → `data-pendo="board-sort-option" + data-sort-type="newest" + data-board-type="private/shared"`
- "Oldest First" → `data-pendo="board-sort-option" + data-sort-type="oldest" + data-board-type="private/shared"`

Test Results:

FAILED - Board page sort options missing data-pendo attributes

Location: Individual board page (e.g., `/tag/private/minneapolis`)

Console output:

- Found 0 board page sort options with `data-pendo="board-sort-option"`

Impact: Cannot track how users sort content within boards

OVERALL: Both 6A and 6B failed - NO sort dropdown options have Pendo tracking

7. HASHTAG LINK UPDATES

Status: ✗ FAIL - NOT IMPLEMENTED

What Should Be There:

- Links have `data-pendo="content-board-tag-link"`
- Links have `data-board-name="[name]"`
- Links have `data-board-type="private" or "shared"`
- URL format: `/tag/private/[name]` or `/tag/shared/[name]` (not just `/tag/[name]`)

Test Results:

FAILED - Content hashtag links NOT updated

Found 3 content hashtag links (excluding sidebar navigation)

All hashtags tested: `#minneapolis`

Issues Found:

- href: `/tag/minneapolis` ✗ (OLD URL FORMAT - should be `/tag/private/minneapolis`)

- data-pendo: null ❌
- data-board-name: null ❌
- data-board-type: null ❌

Note: Sidebar board links DO use new format and have attributes, but content hashtags don't

Impact:

- Cannot track hashtag click engagement in content
 - URL format not updated - still using old /tag/[name] format
 - Missing all metadata for segmentation
-

8. BACKEND ROUTES (URL Compatibility)

Status: ✅ PARTIAL PASS - Backend works, Frontend not updated

What Should Be There:

- Old format /tag/[name] still works (backwards compatibility)
- New format /tag/private/[name] works
- New format /tag/shared/[name] works

Test Results:

PARTIAL PASS - Backend routes correctly implemented

Manual Navigation Tests:

- /tag/minneapolis (old format): ✅ WORKS - Loads board correctly
- /tag/private/minneapolis (new format): ✅ WORKS - Loads board correctly
- /tag/shared/[name] (new format): ✅ WORKS - Loads shared board correctly

Backend Implementation: ✅ COMPLETE

- Backend correctly handles both old and new URL formats
- Backwards compatibility maintained
- New format routing implemented

Frontend Implementation: ❌ INCOMPLETE

- Hashtag links in content still generate old URLs (from Test #7)
- Links missing data-pendo attributes
- Frontend not updated to use new URL format

Conclusion: Backend devs did their part, but frontend link generation wasn't updated

9. SOCIAL MEDIA EMBED TRACKING

Status: **✗** FAIL - NOT IMPLEMENTED

What Should Be There:

ALL embed types need `data-pendo="content-external-link-btn"`:

- Instagram embeds
- YouTube embeds
- TikTok embeds
- Facebook embeds
- Twitter/X embeds
- Reddit embeds
- IMDB embeds

Test Results:

FAILED - Social media embeds missing data-pendo attribute

Tested: Instagram embed (class="EmbeddedMedia")

Found:

- 1 Instagram embed container link (a.EmbeddedMedia)
- href: <https://www.instagram.com/reel/...> ✓
- data-pendo: null **✗**
- data-log-event: mediaClick ✓ (has internal tracking but not Pendo)

Also found:

- 15 Instagram profile/avatar links within embed
- All missing data-pendo attributes

Impact: Cannot track social media embed engagement in Pendo

Note: Embeds have their own tracking (data-log-event) but missing Pendo tracking

Required Fix:

- Add data-pendo="content-external-link-btn" to a.EmbeddedMedia elements
 - Apply to all social media embed types (Instagram, YouTube, TikTok, etc.)
-

ISSUES FOUND (FOR DEV TEAM)

CRITICAL Issues:

1. MODAL BACKDROP FIX - NOT IMPLEMENTED ⚠️ BLOCKER

- Cannot select buttons inside modals using Pendo Visual Design Studio
- Backdrop is still blocking click events from reaching interior elements

Impact: BLOCKS all modal-based feature tracking (save, cancel, close buttons, etc.)

Technical Details Found:

- Modal uses Radix UI (not standard .modal-backdrop/.modal-content structure)
- Modal element: `<div role="dialog">` with `data-pendo="modal-add-message"`
- Modal has `pointer-events: auto` (correct)
- No elements found with "modal" in class name
- Issue: Likely a separate Radix overlay/backdrop element blocking clicks

Required Fix:

- Investigate Radix UI overlay structure (check for Radix overlay/backdrop elements)
- Apply `pointer-events: none` to the backdrop/overlay
- Ensure modal content remains `pointer-events: auto` (already set)

Evidence: User confirmed cannot select modal buttons in Pendo VDS. Console found `role="dialog"`

but no `.modal-backdrop`. App uses Radix UI framework.

High Priority Issues:

1. SIGN-UP PAGE BUTTONS (textaside.com) - NOT IMPLEMENTED

- Neither button has `data-pendo` attribute
- Squarespace code injection script appears to not be added or not executing

Required Fix:

- Add the JavaScript code to Squarespace Settings → Advanced → Code Injection → Footer
- Script should add:
 - * `data-pendo="button-send-text-signup"` to SMS button
 - * `data-pendo="button-download-vcf-iphone"` to download button
- Verify script executes and console logs appear

Evidence: Console returns null for both buttons, HTML inspection shows no `data-pendo` attributes

2. SMS CONTENT TRACKING - NOT IMPLEMENTED

- Backend "Content Added via SMS" event not firing

Impact: Cannot track when users successfully save content via SMS

Required Fix:

- Add `pendo.track('Content Added via SMS', { metadata })` to backend after content creation
- Include metadata: `contentId`, `boardName`, `boardType`, `timestamp`

Note: "SMS Message Received" events are already tracked (existing functionality)

Evidence: Checked Pendo timeline 24 hours after test SMS - no "Content Added via SMS" event

3. BOARD CARD QUICK ACTIONS - NOT IMPLEMENTED

- None of the 4 board card buttons have `data-pendo` attributes
- Missing required metadata (`board-name`, `board-type`)

Impact: Cannot track board card interactions (Add, Rename, Invite, Delete)

Required Fix:

- Add `data-pendo="board-card-add-btn"` (and `rename-btn`, `invite-btn`, `delete-btn`)
- Add `data-board-name` attribute with board slug/name
- Add `data-board-type` attribute ("private" or "shared")
- Apply to ALL 4 button types on ALL board cards

Note: Buttons have `data-testid` attributes but missing all Pendo attributes

Evidence: Inspected Add button shows `data-testid="button-add-card-drip"` but no `data-pendo`

3. SEARCH INPUT FIELD - NOT IMPLEMENTED

- Search input missing `data-pendo` attribute

Impact: Cannot track search usage

Required Fix:

- Add `data-pendo="search-input"` to search input field on /search page

Evidence: Console shows "Search input `data-pendo: null`"

4. SORT DROPDOWN OPTIONS - NOT IMPLEMENTED

- Neither All Boards page nor individual board pages have `data-pendo` on sort options

Impact: Cannot track user sorting preferences

Required Fix:

- All Boards page (/): Add data-pendo="all-boards-sort-option" + data-sort-type to all 3 options
- Board pages (/tag/*/): Add data-pendo="board-sort-option" + data-sort-type + data-board-type to options

Evidence:

- Console found 0 All Boards sort options
- Console found 0 board page sort options

5. HASHTAG LINKS - NOT IMPLEMENTED

- Content hashtag links missing all data-pendo attributes
- Still using OLD URL format /tag/[name]

Impact: Cannot track hashtag engagement, URLs not updated

Required Fix:

- Add data-pendo="content-board-tag-link" to hashtag links within content
- Add data-board-name and data-board-type attributes
- Update URL format from /tag/[name] to /tag/[type]/[name]
- Apply to hashtags in: /all-texts, board pages, search results

Note: Backend routes work correctly (Test #8 confirmed), but frontend link generation not updated

Evidence:

- Found 3 content hashtags, all with null attributes
- URLs still use /tag/minneapolis instead of /tag/private/minneapolis
- Manual navigation to /tag/private/minneapolis works (backend OK)

6. SOCIAL MEDIA EMBEDS - NOT IMPLEMENTED

- Instagram embeds (and likely all other embed types) missing data-pendo attribute

Impact: Cannot track social media embed engagement

Required Fix:

- Add data-pendo="content-external-link-btn" to all embed wrapper links
- Target: a.EmbeddedMedia elements (Instagram)
- Apply to ALL embed types: YouTube, TikTok, Facebook, Twitter, Reddit, IMDB

Evidence:

- Found 1 Instagram embed with data-pendo: null
- Embed has data-log-event="mediaClick" but no Pendo tracking

Medium Priority Issues:

[None yet]

Minor Issues / Notes:

[None yet]

SUMMARY

Fully Working:

- Backend Routes (partial) - Backend routing supports both old and new URL formats

Needs Fixes (8 items):

1. Sign-Up Page Buttons (textaside.com)
2. SMS Content Tracking Event
3. Modal Backdrop Fix (CRITICAL BLOCKER)
4. Board Card Quick Actions
5. Search Input Field
6. Sort Dropdown Options
7. Hashtag Link Updates
8. Social Media Embed Tracking

Not Tested: None - all items tested

Overall Status: **✗ FRONTEND CODE NOT DEPLOYED TO PRODUCTION**

- Backend changes ARE live (routing works)
- Frontend changes are NOT live (all data-pendo attributes missing)
- Recommendation: Deploy frontend build to production and retest
