

Aside - Pendo Implementation Fixes Required

Date: November 6, 2025

Tester: Meredith

Application: textaside.app

REMAINING ISSUES TO FIX

1. MODAL BACKDROP FIX - CRITICAL BLOCKER

Status: ❌ FIX APPLIED TO WRONG ELEMENT

Issue: CSS fix was applied to `.modal-backdrop` but app uses Radix UI with different structure

Console proof (with modal open):

Modal pointer-events: auto ✅ (correct)

Overlay pointer-events: auto ❌ (WRONG - should be 'none')

Root Cause: Overlay intercepts clicks, blocking Pendo Visual Design Studio from tagging buttons inside modals

Required Fix:

CSS

/ Target the correct Radix UI overlay element */*

```
[data-state="open"] {  
  pointer-events: none !important;  
}
```

/ Ensure modal content still clickable */*

```
[role="dialog"] {  
  pointer-events: auto;  
}
```

Test After Fix: Should be able to tag buttons inside modals with Pendo Visual Design Studio

Impact: Blocks tracking of ALL modal interactions (Save, Cancel, Close buttons, etc.)

2. SOCIAL MEDIA EMBEDS - MEDIUM PRIORITY

Status: ❌ NOT IMPLEMENTED

Console verification:

Found 1 Instagram embed
- class: EmbeddedMedia ✅
- href: https://www.instagram.com/reel/... ✅
- data-pendo: null ❌ (should be 'content-external-link-btn')

Required Fix:

- Add `data-pendo="content-external-link-btn"` to `a.EmbeddedMedia` elements
- Apply to ALL embed types:
 - Instagram: `a.EmbeddedMedia`
 - YouTube: Similar wrapper elements
 - TikTok: Similar wrapper elements
 - All other social media embeds

Impact: Cannot track social media embed engagement
